- Mobile friendly prefabs versions can be found with *Mobile_* prefix and materials with *_low* suffix.

Technical details

- All props and prop variations have game ready prefabs.
- No prop has more than 2400 triangles or 1240 vertices. By average a prop range around 800 triangles and 450 vertices.
- All the prefabs have custom modeled mesh colliders for the best performance and collision accuracy.
- All furniture prefabs also have LOD Group Component
- Texture size is 1024 in all props. No transparent textures or backface-culling used in models. This makes assets low poly and mobile friendly. Each texture has a Photoshop .PSD file included for further editing purposes.
- Pack uses a custom made Supercyan "CelShader" shader in all props.
- Models FBX versions are between 2011 and 2018. Older versions can be provided on request.

CelShader shader properties

MainTex = Main texture

ColorMultiply = Color that gets multiplied with the main texture

ColorOverride = Color that is put on top of the main texture, alpha is the intensity

Ramp = Color lookup table that is applied based on the shadows

RampIntensity = Transparency of the applied ramp

ShadowIntensity = Shadow transparency
